

WE ARE DEVELOPING ANIMAL HEALTH TECHNOLOGIES THAT THE WORLD NEEDS NOW AND INTO THE FUTURE, TO MAKE A GLOBAL DIFFERENCE.

EVAH Corp (EVAH standing for Evolution in Animal Health) is a Québec-based biotechnology company that specializes in the health of food animals. The company also has an aquaculture division in Atlantic Canada.

The global population will grow significantly over the next decades, driving demand for food even higher. The health of people, animals and the environment are interconnected, and that's where WHO's "One World One Health" concept comes in.

This approach is particularly relevant in the areas of food safety, the fight against zoonotic diseases (infectious diseases that can be transmitted from animals to humans or from humans to animals, like influenza, rabies and Rift Valley fever) and the fight against antibiotic resistance (which occurs when resistant microbes are selected after antimicrobial treatment and diseases become harder to treat).

About 70% of the increased food production will have to come from new technologies and innovations that address the need for a regular supply of healthy animal protein.

World Health Organization's concept "One World One Health"

WHY ANIMAL HEALTH?

Given what's at stake and the urgent need to respond to the current health crisis, the former managers and staff of Québec-based Prevtect Microbia are teaming up again to build a new, innovative platform.

EVAH specializes in the research and development of biologics to protect food animals from bacterial disease, as an alternative to antibiotics.

We are also developing microbiome-based solutions to enhance the growth and performance of food animals, as well as a parasiticide for farmed salmon that will ensure sustainable growth and protect wild salmon.

WHO WE ARE

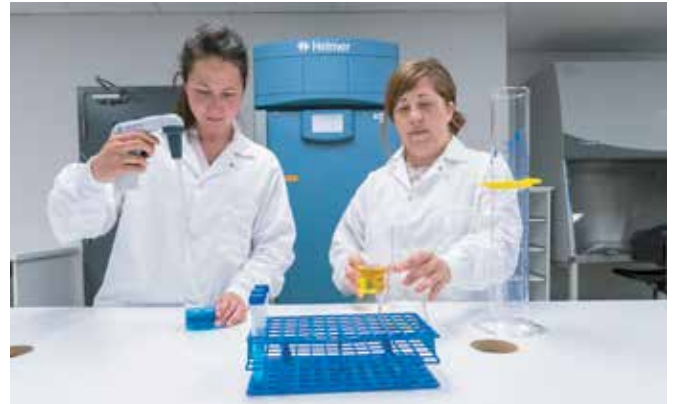

EVAH is a Business and IP platform in Animal Health based in Canada. The team includes business people with experience in selling innovations, and scientists with expertise in developing industrial animal health products.

This collaboration will create intellectual property value for animal health products that are in high demand.

From left to right: Michel Fortin, President & Chief Executive Officer of EVAH Corp with Scientific Advisory Committee: André Buret, PhD, John Brennan, PhD, Paul Dick, DVM, MSc and Jean Szkotnicki, MSc.

Founded in Québec, EVAH has 18 employees in that province and in Atlantic Canada, most of whom are women scientists. They are all working together to become a Canadian leader in animal health, addressing a gap in its sector by, on one hand, partnering with academic institutions and the scientific community and, on the other hand, partnering with large Animal Health companies.

Establishing a global presence requires resources that SMEs don't have. EVAH is committed to all three stages of research and development: strategic planning assessment, efficacy pilot trials and safety testing, and final product formulation.

Once the technologies and innovations have gone through the research and development phases, EVAH will partner with large pharmaceutical companies that have the resources to obtain regulatory approvals and commercialize products worldwide.

EVAH's positioning is timely in the knowledge sector and will contribute to tomorrow's global economy.
